

ChatGPT Prompt: Would you give that med?

Create a scenario called "Would You Give That Medication?" The scenario should include the patient's age, gender, and current complaint (diagnosis) and a short description of what is going on with relevant medications, vital signs, health history, and it should conclude with **(insert medication name here)** medication order. The nursing student should be able to decide whether, based on the health history, current medications, and vital signs if they would give the medication being ordered or if they would hold it and notify the healthcare provider.

Would you give that med scenario example

For this scenario, the medication cephalexin was included in the prompt above.

55-YEAR-OLD MALE

URINARY TRACT INFECTION

The client currently has a UTI. He has abdominal pain and dysuria.

Hx: HTN, CAD

Allergies: PCN

BP: 140/80

HR: 76

RR: 16 BPM

O2 sat: 95% on room air (RA)

Temp: 98.6 F

Hgb: 10.6 g/dL

Hct: 39%

Creatinine: 1.6 mg/dL

Order:
Cephalexin PO 250 mg every 12 hour for 7-14 days

Students would select that they would hold this medication because the patient has a penicillin allergy.

ChatGPT Prompt: Emergency or not?

Can you create short scenarios for nursing students called "emergency or not?". Please include short medical scenarios that nursing students can work through to decide if they need to take emergent action or if the situation does not warrant an emergent action.

Emergency or not scenario example

65-YEAR-OLD MALE

Patient presents with sudden-onset severe chest pain radiating to his left arm. He describes it as crushing and rates it 10/10 on the pain scale. He also feels nauseous and diaphoretic.

Vital Signs:

- Blood Pressure: 160/100 mmHg
- Heart Rate: 110 bpm
- Respiratory Rate: 24 breaths per minute
- Oxygen Saturation: 96% on room air
- Temperature: 98.8°F (37.1°C)

**Emergency or not?
What do you want to know?
What would you do?**
